Do you have a favorite place—a place with family and relatives (亲戚), good weather and fun things to do? I'm glad I have. New Jersey (新泽西) is my favorite place. Why do I like it? There are many reasons (原因).

The first reason is my family and relatives. Half of my relatives live in New Jersey. When I visit them, my

cousins and I play games and have fun together all day. My uncles and aunts like taking me to the park. There we can ride roller coasters (过山车) and play in the water. We all feel happy.

The second reason is the weather. It is not hot, and it's always cool. When I think about my visits to New Jersey, I can just feel the little wind in my hair. It's so great to stay there.

The third reason is catching crabs (捕蟹). We keep the blue crabs and the snow crabs, and we let the others go. My cousin catches a crab. It is so big that it can't get out of the crab bag!

For all these reasons, New Jersey is my favorite place.

29. How many reasons does the writer give?

- A. Two. B. Three. C. Four. D. Five.

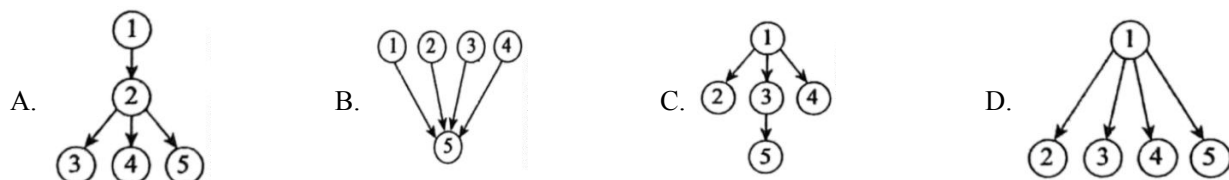

30. What can we know from this text?

- A. The writer lives with his uncle and aunt.
B. The writer can catch crabs in New Jersey.
C. The weather in New Jersey is too cold.
D. The writer likes to stay with his classmates in New Jersey.

【31 题详解】

Men began to make maps of the world hundreds of years ago. But there was always something wrong in early maps, because people didn't know much about the world then. They even thought the Earth was flat (扁平的).

Some people might think the Earth was like a ball, but they could not be sure. And most people at that time would laugh at them when they said the Earth was a ball. About 500 years ago, people learned about the truth. Captain Magellan sailed (航行) his ships west. But he came back home from the east. He sailed around the Earth. Captain Cook also sailed west and came home from the east.

Both of the captains drew maps on their trips. These maps helped other people a lot. And then people could make better maps because they learned more and more about the world.

Before space travel began, our maps already (已经) looked really good. Now people can take photos of the Earth from space. These photos show the Earth in a new way. People are making maps of the world better and better.

33. Why was there always something wrong in early maps?

- A. People didn't have good drawing tools.
- B. People knew little about the world then.
- C. People just began to make maps.
- D. People couldn't go to far places.
